## We're making places matter.

Green Furniture Concept create public space interiors, bringing sustainable seating and lighting design to the core of urban placemaking. Our portfolio ranges from transportation hubs and healthcare centres to school campuses and retail complexes. We work closely with architects, facility managers and industry stake-holders to create customised interiors, making sure they meet the needs of all the people they serve. From our offices in Scandinavia and North America, we've become internationally recognised as pioneers of sustainable design. We're working to make a world-positive impact, and show the industry why making places really matters.

## We're working for the greater good.

Our approach is to reimagine public spaces and their value to the communities they serve. Passionate about placemaking, designing experiences is an essential part of the public interiors we create. That's what inspires us to revitalise existing environments, connect consumers to their surroundings and protect the planet along the way. It's why we're committed to bringing beauty to sustainability, and to designing furniture that lasts as long as the buildings they live in. We're creating a new standard for public space, and working for a world where making places really matters.

# Our purpose is World Positive Impact.

Green Furniture Concept was born out of a deep desire to do good, take responsibility and always challenge ourselves and the industry to change for the better. We recognize the importance of considering the full life cycle and therefore use the principles of circular economy as a guide in our sustainability work.

We understand that producing physical products and shipping them while talking about wanting to do good can be perceived as paradoxical. We continuously work to strengthen, learn and improve the way we do business, to be better and have less impact on our environment. Our aim is world positive impact and contribute to increased regeneration of natural systems, zero waste, no pollution and keeping materials and products in use to do good rather than less harmful. Quite an ambitious mission we're on and we're moving closer to it every day.

## Reducing carbon footprint

### Proactive development

When developing new products, we use a tool we call the circular design checklist. This checklist is used in development projects to make sure that aspects that would have a negative impact on the environment are not missed. It is also the base of our Circular Design Indicator that is used to evaluate projects in terms of their sustainable and circular output. Many of the bullet points on this checklist go into lowering the CO2 footprint and extending the lifespan of the product, already in the first steps of the design and development of a new product.

We continually look for new and better material and production methods to reduce our environmental impact further. We choose our materials with care, using renewable and recyclable materials and the highest possible percentage of recycled and upcycled content we can find. This lowers the energy use in material processing, which reduces the CO2 footprint of the product.

### Carbon offset

We plant trees for everything we sell through a reforestation project in Colombia. We work to reduce our CO2 footprint proactively but also compensate for the CO2 release we are a part of creating. We are looking for ways to increase the forest where it matters the most for our planet. This is why we've decided to plant trees and help the regrowth in this region, contributing to a project that protects river basins, encourages natural habitats, produces the life-giving oxygen needed to sustain them, and binds carbon dioxide.

**The more Green places we make - the more trees we plant!**

We plant one tree in our plantation sites for every sold meter of furniture. That is one of the main reasons our seating series Nova C is actually climate-positive.

# Designing spaces

We're working to boost the standard of public space interiors as a whole. Our guiding principles are leading us forward, placing sustainability, design excellence and real human needs at the core of all we achieve. We bring nature indoors, connect people to places, and individuals with each other. Can indoor spaces create deeper sensory experiences of nature, and make people feel like they belong? We think they can, and that's why we'll continue to make public interiors matter even more.

## The flexibility of modular

Tailored curvatures in line with the architecture of the space will lead the flow and control the pace. Modular furniture are easy to reconfigure and respond to changes and retail performance. Finding the right seating density ratio makes commercial sense, as the seating can be installed to direct traffic into commercial areas. Our client's experience shows that an increase in dwell time will increase revenue in commercial areas.

Traditional seating - 126 Seats

Green seating - 180 Seats

Green seating - 126 Seats + 30%

With convex and concave shapes plus the "endless" seating functionality, space can be used more efficiently. As a result, 30-50% more seats are available – at 50 cm seating area per person. The space saved by the intelligent arrangement of Green seating modules can be used in a variety of ways for example a coffee shop or a sushi bar.

# Ascent seating series

As its name suggests, Ascent is a seating system that elevates public space furniture to new heights. The series was created in consultation with architects and planners to create a flexible, modular system that could change and adapt as its surroundings evolve. Designed with placemaking in mind, Ascent's soft contours, smooth textures, and sustainable wood make public space interiors warmer and more welcoming.

Ascent received the Red Dot Award for Product Design in 2021.

reddot winner 2021

## Sustainability

Ascent Series is designed and developed to support a longer use cycle. The Ascent toolbox contains several individual modules that can be put together to different configurations, making it possible to change a space when needed by simply reconfiguring the modules. Ascent is designed with interfaces that take future design elements into consideration, making the series continuously evolving and up to date. Influenced by the aesthetics of nature, Ascent is designed for being timeless, rather than focusing on trends and contemporary design. As sustainability and circularity are guiding our work at Green, the choice of materials, chemicals, and the design itself follow these principles already in the design process and other processes going forward.

# Ascent Double Rise

Characterised by its sculptural contours and sloping backrest, Ascent takes modular seating to a new level. The concept was created in response to the growing demand for placemaking designs able to shape public space in new ways. As the modules are configured to create a unique variety of curving shapes, they can also create backrests with sloping profiles and eye-catching silhouettes. The design is fully interactive, inviting architects, planners and interior designers to customise the backrests to meet practical needs or find new expressions. Inspired by Scandinavia's mountains and fjords, Ascent holds the potential to interpret furniture design as a seating landscape for public space interiors. Functional, playful and interactive, Ascent brings places to life and makes every interior unique.

reddot winner 2021

01. Ascent Double Rise Straight 02. Ascent Double Rise Curved 60 Degree Left  
03. Ascent Double Rise Curved 60 Degree Right

## Ascent Back

This single-sided version of Ascent and its open back, makes it easy to design around walls and follow other structures. Ascent offers an alternative to long rows of lateral seating and provides more seats per square metre in the same space. Each installation has placemaking potential, introducing soft contours and warm textures that create a sense of place as they enhance the surroundings. The warmth of the natural wood resonates throughout large-scale interiors, making public spaces feel warmer and more inviting.

**01.** Ascent Single Back Straight **02.** Ascent Single Back Convex 60 Degree  
**03.** Ascent Single Back Concave 60 Degree

reddot winner 2021

# Ascent Double Back

Ascent's double-sided design offers twice as much seating as its single-sided counterpart, yet still provides the same degree of comfort, flexibility and configurability. Its modular components save space by creating continuous seating units and can be taken apart and reconfigured to meet new requirements. Ascent can be configured to maximise the flow of individuals towards specific areas, providing a subtle means of guiding visitors towards departure points and commercial areas. Stackable, easy to maintain and transport, Ascent is an ever-evolving seating solution designed to adapt to twenty-first century public interiors.

reddot winner 2021

01. Ascent Double Back Straight 02. Ascent Double Back Curved 60 Degree

## Ascent Double Bench

With its low, lateral shape and subtle contours, the backless version of Ascent can wind through interiors transparently without hiding other features in the space. Its backless design and open undercarriage enable all areas to remain in full view, making open-plan surroundings appear more spacious, and more secure. Each part is modular and can quickly and easily be reconfigured into a new design when requirements change. New components can be introduced to create backrests, change the angles of the curves or reconfigure the shape altogether. The bench's low profile eliminates barriers between people and services, making all parts of a public space appear more accessible.

# Nova C seating series

Our seating line Nova C gives you the flexibility and freedom of design through modularity to create configurations as unique as your space with the potential to offer room for both interaction and privacy.

The design of the bench shapes a seamless seating line for natural flow control, while the body-conscious contours ensure comfort. The small foot-print makes efficient use of the space. And the configurability also goes into colours and accessories – every project can be unique.

Nova C is certified with the Nordic Ecolabel.

## Sustainability

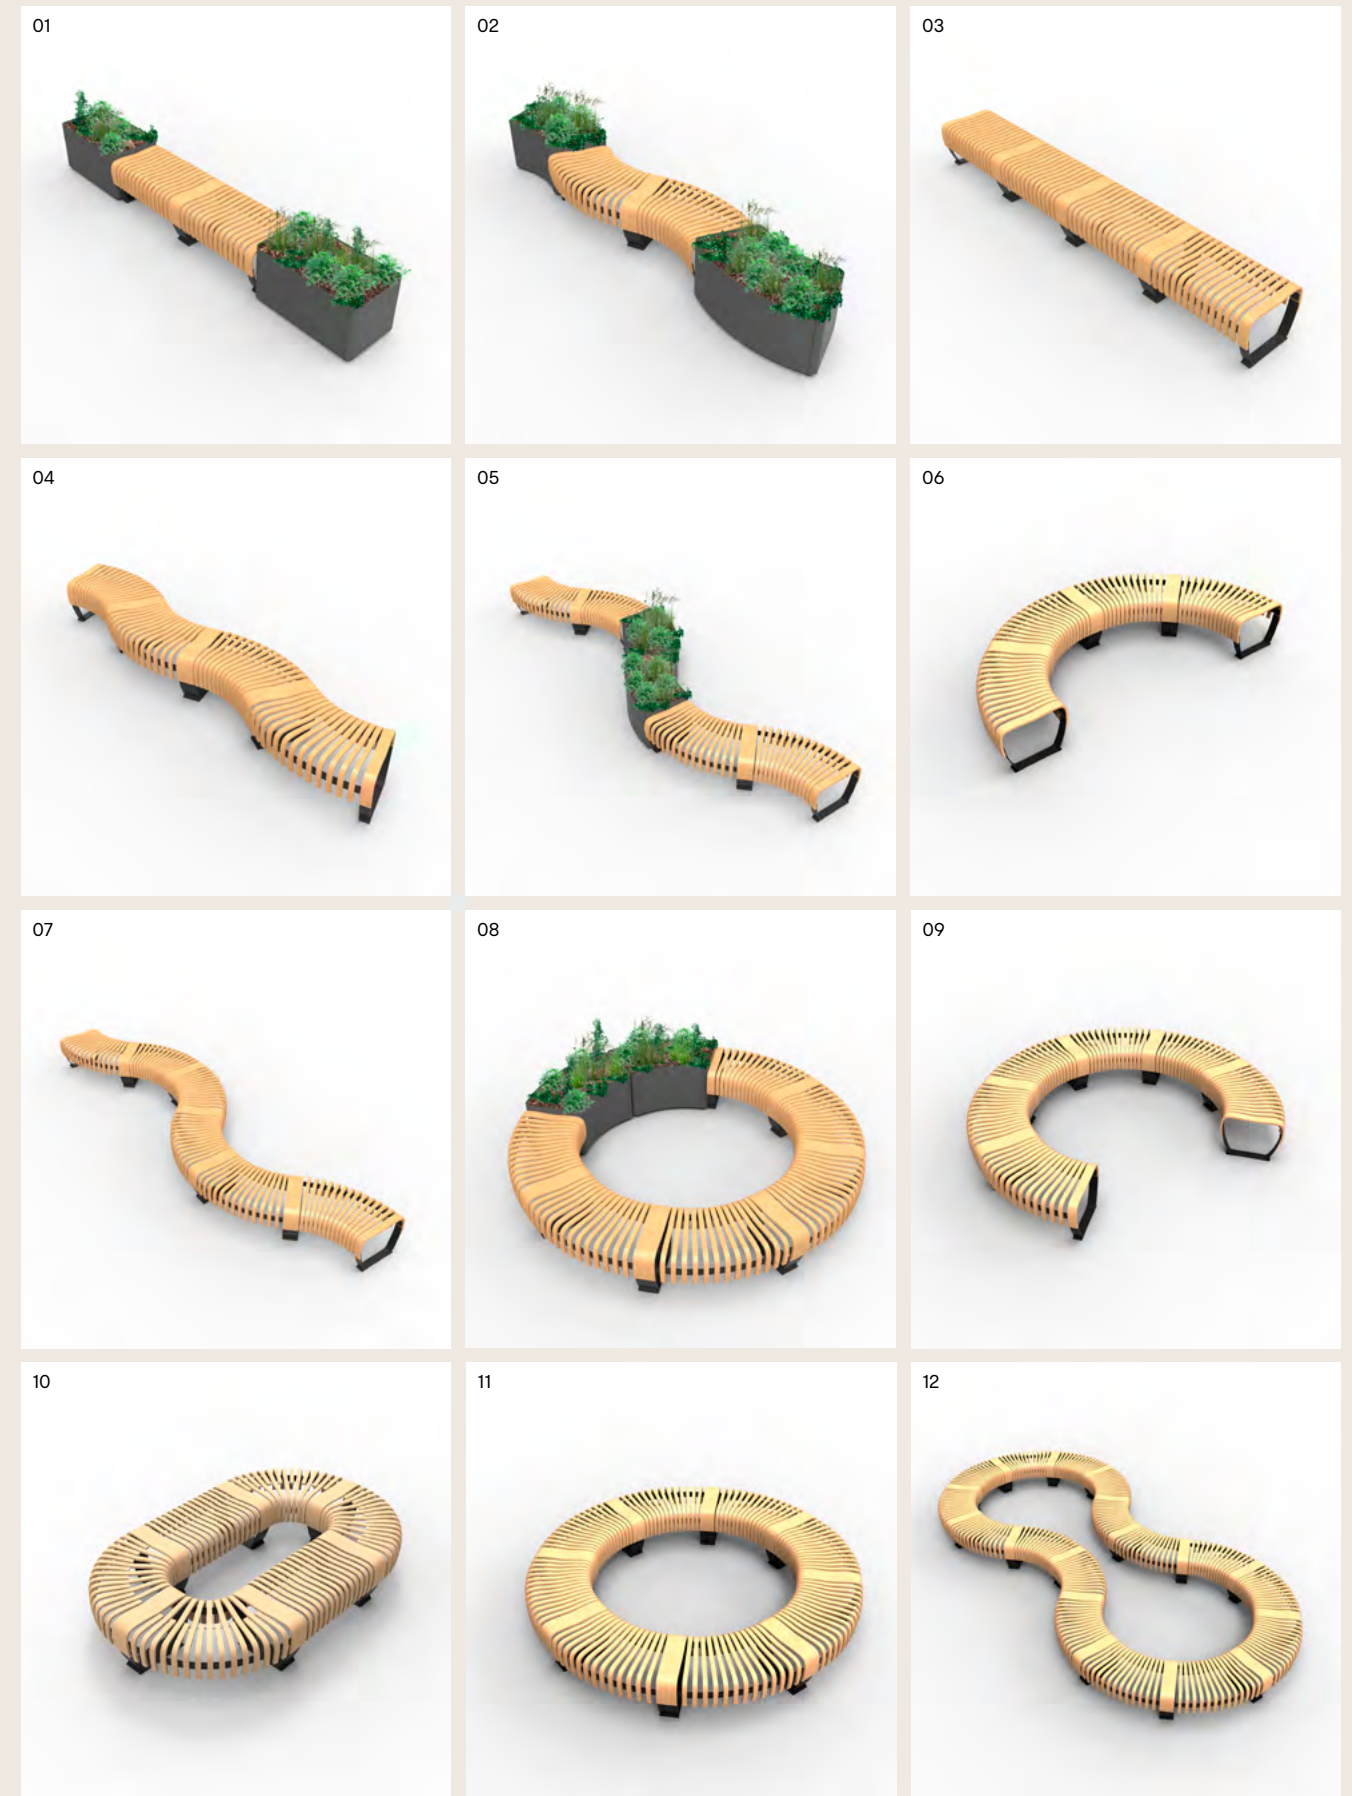

The Nova C Series is designed and developed to prioritize a long use cycle. Maintenance and replacement of parts can be performed by the client. The series is made of several building blocks that can be put together to thousands of different configurations, this to make it possible to renew an area by reconfiguration. The design is made to be timeless with inspiration from nature rather than focusing on trends and contemporary aesthetics. In the design process the choice of materials, chemicals and the design itself has been guided by the principles of circularity. The Nova C Series is a part of our Buyback system.

# Nova C Bench

The Nova C bench is more than a seat, it's a design that brings people together as they take a moment to sit and unwind. The bench can be designed in a wide range of shapes and configurations that divide space, create separate areas or lead individuals towards other destinations. Crafted without a backrest, the seat has a lower profile than many other types of benches. As a result, the bench doesn't interrupt views across the space, making open-plan surroundings appear more spacious. This seating includes curving sections designed to create serpentine shapes, semi-circles, crescents and full circles. A wider version is available, making it easy to designate distances between individual seats when needed.

**NOVA C BENCH** 01. Straight with Planters 02. Wiggly with Planters 03. Straight 04. Wiggly 05. Ondular with Planters 06. Bracket 07. Ondular 08. Circle with Planters 09. Omega 10. Stadium 11. Donut 12. Infinity

# Nova C Double Bench

Characterized by sleek lines, generous proportions, and smooth contours, this new double-side bench creates a focal point for public interiors. The bench's low, lateral construction gives it an understated profile, while its serpentine shape adds an eye-catching complement to contemporary environments. The design was created in response to the growing demand for seating systems that reflect the open-plan design of retail zones and food courts. Individuals can sit side-by-side on either side or turn to face each other when seated at either end—possibly combining with sections Nova C Double to have seating slats in the center of the design rising to form backrests providing additional comfort and back support.

# Nova C Back

The configurably winding Nova C allows grand seating in scale with grand indoor spaces. The bench shapes a seamless seating line for natural flow control, while the body-conscious contours ensure comfort. The small footprint makes efficient use of the space. And the configurability also goes into colors and accessories - every project can be unique. The grand configurations are held in place by their own weight, with no need to bolt the sections to the floor, yet can be snapped apart for thorough cleaning or reconfiguration. Finished with natural hard wax oil, a sustainable choice that works similarly to shoe polish - easy to maintain always-like-new.

# Nova C Double Back

With its striking profile and modular construction, the Nova C double-sided bench brings beauty and versatility to public space environments. The design invites those seated to sit back, enjoy the moment, and take in the surroundings before rising to their feet again. The backrest enables individuals to sit apart on either side or turn to face each other when seated at either end. This version is crafted with a backrest that rises from the centre to provide comfort and support for users of all age groups and levels of mobility. The streamlined proportions of this seating make it a natural fit for open-plan interiors, and give it the potential to divide and demarcate spaces if required.

## Nova C Lounge

The Nova C Lounge seating invites individuals to slow down, sit in comfort and take in their surroundings. The sweeping seat and backrest form an ergonomic design intended to refresh all body parts, including the lower legs and feet. The modular design can be extended to create any number of seats, making space for families and groups to sit together. As the integrated armrests curl upwards to form small tabletops, they designate regular distances between the individual seats. The recliner is a leading example of wood innovation and brings a new ergonomic comfort to public space design.

## Nova C Double Lounge

The Nova C Double Lounge seating inspires a sense of comfort seldom seen in public space furniture. The design invites those seated to sit back, enjoy the moment, and take time to relax and refresh. Although the sweeping seat and backrest have the appearance of an individual lounge seat, they are a modular design that can be extended to create any number of seats. As the integrated armrests curl upwards to form small tabletops, they designate spaces between the individual seats. The lounge's comfort is visible even from a distance, making it easier to draw passengers through to adjacent areas.

## Nova C Perch

A popular choice for tight spaces, the Nova C Perch standing bench provides seating in places where conventional furniture won't fit. Perch can seat large crowds as they wait in line or make room for other groups to pass. Standing promotes better posture than sitting, boosting circulation throughout the body and the brain. The bench provides space for individuals to take a short pause, making it easier to keep people on the move as they traverse through busy environments. The seat supports those leaning against it, enabling them to remain upright on their feet. The double-sided design can separate individuals and groups by seating them to face opposing sides. Like the other designs in the Nova C series, Perch can be extended to create any length and customized in a range of colours.

## Nova C Kids

The winding Nova C series also has a playful little caterpillar in the family, the 'Nova C Kids.' The Nova C Kids uses the same rib shape as the Nova C Bench, and it's only by giving one of the ribs stylistic properties of ahead and by playing with new and lower legs that the Green Furniture designers have turned the bench into an animal to play with. It is configurable like its grown-up parents, with modularity and freedom of size and colours. Durable for public interior spaces, a functional piece of furniture for the little ones to roll all over, generation after generation.

## Nova C Divider

Space dividers attached to the Nova C Back modular seating. Seamless, and with curvature of choice just like the seating. The Nova C divider comes with cut out holes for a see-through effect (custom patterns possible) or plain which gives a surface where a message or image can be applied.

## Configurations with 4 bench modules

Gives you the flexibility and freedom to optically change your seating area. Easy and fast reconfiguration of existing bench modules to meet the needs of specific events or promotions.

## Configurations with 8 bench modules

All these forms can be created with the same 8 bench modules within 5 minutes.

### Replacing ribs

Simple and cost-effective replacement of components in rare case of damage. Individual wooden ribs can be supplied by us at any time and the replacement involves 4 screws only.

Each rib is made from 13 layers of laminated beech, oak or birch wood. The layers are glued and pressed together to form a 2 cm thick plate that is cut to ribs of selected size. The ribs are then bent to its custom shape. Using a Swedish handicraft technique, the ribs are processed under high temperature and pressure to achieve high stability.

### Easy repair

Treatment of deep scratches with RUBIO MONOCOAT – Oil plus 2C

Deep scratches can be treated with a hard wax finish in the same color as the original treatment. This restores the protection of the injured surface. Simply apply the hard wax with a cloth on the scratched areas and the damage will be barely visible.

# Wood colours

The wood in our furniture is treated with **RUBIO MONOCOAT – Oil plus 2C**, a plant-based hard wax oil with 0% VOC. The oil which creates a molecular bonding with the wood that preserves the natural look and feel of the wood, while making it resistant over time and makes removal of eventual scratches quick and easy.

## Leaf Lamp lighting series

The Leaf Lamp system provides ambient lighting and acoustic solutions for a wide range of public interiors. Each lamp enhances the surroundings with diffuse light, soft textures, and natural materials. The shade is crafted from class A-certified\* sound-absorbing and flameproof felt designed to help balance acoustic levels. The lamps can provide focal points within large areas or form part of a placemaking strategy in public space.

### Sustainability

Leaf Lamp Series is an acoustic lighting series designed with a harmonious organic shape inspired by nature. It is made from biological and technical materials. Leaf Lamp can easily be taken apart for repair, replacement, or recycling with easy maintenance. When the product reaches its end of life, it's possible to return materials for recycling or the biological cycle.

# Leaf Lamp Pendant

The Leaf Lamp pendant brings spaces to life with its colorful shade and eye-catching profile. The lamp is crafted from clusters of individual wool felt pieces that conceal discreet LED-lighting units. As the lamp radiates pure, white light, the felt components absorb background noise to balance the acoustics. The lamp creates a focal point that changes the perspective of time spent in waiting areas, terminals, and corporate environments. Several lamps can be combined to create a series of statement-making lights or clustered together to create a canopy effect. The Leaf Lamp pendant brings sustainability and style to any environment.

**ATMOSPHERE** Cozy, warm, protected, Nordic design

**MATERIAL** Natural materials - sheep wool and birch wood

**ACOUSTIC FUNCTION** Absorbs sounds and creates good acoustics for conversations

**ABSORPTION EFFECT** Positive room air through absorption of pollutants by the keratin in the applied sheep wool

**Leaf Lamp Pendant**

Ø 130cm

# Leaf Lamp Tree

Inspired by nature, the Leaf Lamp Tree brings authentic materials and organic design to the interior. Like a living tree, the lamp's trunk and branches are made from slender wooden stalks and natural birch bark. A bird's nesting box sits among the branches, hiding the lamp's electrical components from view. The trunk is made to attach to an optional base plate or bolted directly to the floor. The shade is crafted from pieces of wool felt that diffuse the light cast by LEDs integrated into the design. The felt material has class A-certified acoustic properties that dampen ambient noise in the surroundings. The Leaf Lamp Tree is made to enhance the interior even when not illuminated, providing a key component for placemaking strategies.

# Leaf Lamp Link Tree

The Leaf Lamp Link Tree is designed to provide a 'plug-and-play' solution in a biophilic package, for busy environments and lively thoroughfares. The powder-coated steel pipe trunk creates space for wiring and cables hidden inside. The optional 360° Seamless table and integrated power points create an inviting tech-enabled spot with space for people to connect and devices to recharge. Like the other Leaf Lamp versions, the wool components in the shade diffuse the light while helping to balance the acoustics in the surroundings. The Leaf Lamp Link Tree can conceal equipment such as cabling, transmitters, connector boxes, and circuitry, making it possible to integrate sensors, speakers, and cameras discreetly into the surroundings.

# Seamless Table series

The Seamless Table is much more than a surface – it’s a modular tabletop design capable of creating a space within a space. The contouring tabletops are inspired by natural shapes to create multipurpose spaces. The table includes charging stations and is perfect for ad-hoc meetings, eating, drinking, or working on the fly, for both groups and individuals to meet and interact. The tabletop works in tandem with the Leaf Lamp Link Tree as “the Biophilic combo,” creating a wide variety of placemaking possibilities. Both the table and the Leaf Lamp Link Tree can be scaled in size to suit the proportions of the surrounding space. When combined, the Seamless table and the Leaf Lamp Link Tree bring a unique and inviting touch to their surroundings. What if you could meet under a tree?

SEAMLESS TABLE CONFIGURATIONS 01. Tilde 02. Wiggly  
03. Straight 04. Half Circle

## Sustainability

The Seamless Table Series is a nature-inspired, biophilic combo ideal for ad-hoc meetings, group study, and individual work in public spaces. It is made from biological and technical materials. The seamless table can easily be taken apart for repair, replacement, or recycling with easy maintenance. When the product reaches its end of life, it’s possible to return materials for recycling or the biological cycle.

## Accessories

Our accessories series of dividers, planters and recycle bins are designed to fit our seating series. They also work very well as stand-alone products. The series is kept as simple as possible with few materials and substances.

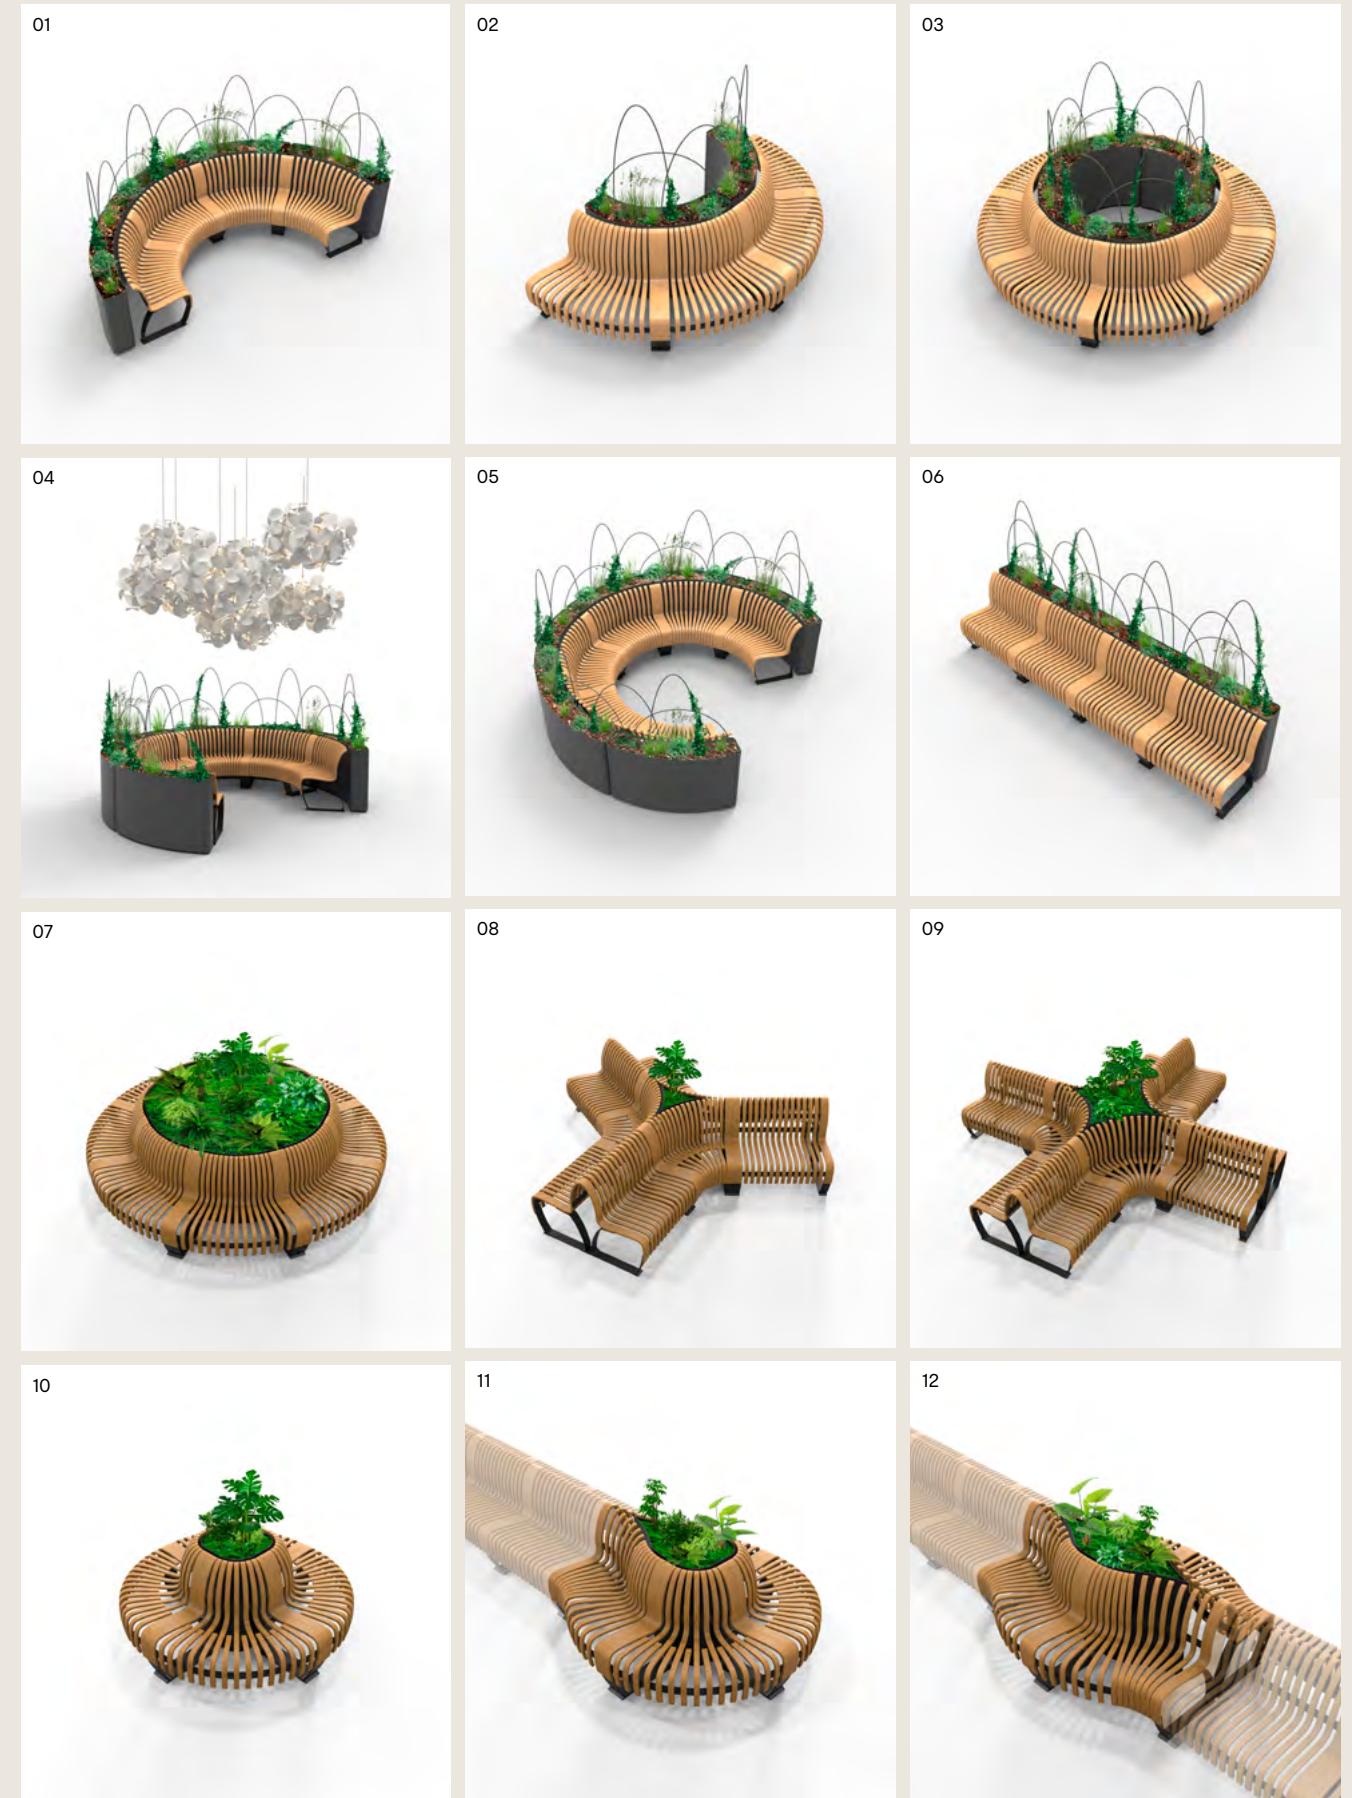

# Planter Divider

Planters that fit with the Green Furniture seating or connect modularly to form a curved, friendly wall of indoor and outdoor plants. Seamless and with the curvature of choice, just like the seating. The solid metal accessories are designed with the Green Furniture Concept seating series Nova C and Ascent in mind and work very well as stand-alone products.

## BENEFITS OF INDOOR PLANTS

- Reducing carbon dioxide levels
- Increasing humidity
- Reducing levels of certain pollutants, such as benzene and nitrogen dioxide
- Reducing airborne dust levels
- Keeping air temperatures down
- Can be equipped with Mona Plant System on request

**PLANTER DIVIDER** 01. Bracket Concave with Planters 02. Bracket Convex with Planters 03. Circle with Planters 04. Omega with Planters and Leaf Lamp Pendant 130 05. Omega with Planters 06. Straight with Planters 07. Circle with Planters 08. Crossroads 3 Small with Planter 09. Crossroads 4 Small with Planter 10. Donut with Planter 11. Droplet with Planter 12. Droplet with Planter

# Planter

Planters are in line with the Green Furniture seating. Can serve as corners, connectors dividers, and turning joints in a bench formation. Seamless and modular, and with the curvature of choice, just like the seating. The solid metal accessories are designed with the Green Furniture Concept seating series Nova C and Ascent in mind and work very well as stand-alone products.

# Recycle Bin

Recycle bins that stay in place and are easy to empty. The bins connect as many as desired for recycling. The solid metal accessories are designed with the Green Furniture Concept seating series Nova C and Ascent in mind and work very well as stand-alone products. Material: Powder-coated steel (color of choice) 80-liter individual volume. Internal container with handles for quick emptying. The weighted bottom also makes the one-piece stable. Standard recycling texts/icons: Glass, Paper, Trash Custom color lids, text, and icons on the lids are available.

**Material** - Powder coated steel (color of choice)  
**Volume** - 80-liter individual volume.  
**Internal container** with handles for quick emptying.  
**Weighted bottom** makes also one piece stable.  
**Standard recycling texts/icons** - Glass, Paper, Trash  
 Custom color lids, text and icons on the lids are available.

# Designer Tools

## Layout Planner

With the Layout Planner you'll be able to create your own design with the products from all of our series. Experiment with different shapes or upload a floor plan to add a layout to your own space. The possibilities are endless!

## File library with CAD and images

Search our website for pages, CAD files, high-resolution images, spec sheets and manuals of all products.

## Colour Guides

Download guides with colour options for all wood, metal and wool felt parts of our series.

# Let us design your next project

Let our in-house designers help you with a free 3D floorplan rendering of your specific project. We design to achieve the greatest visitor satisfaction in mind, using our modular seating solutions to guide people flow and create a place that encourages both social interaction or room for distancing and privacy when needed. Get in touch today for your free rendering!

# The Green Services

Being a sustainability-driven company, we believe in the principles of a circular economy. We keep the products and materials in use as long as possible, aiming for zero waste. Seeing how wasteful the traditional linear sales model is, we want to be part of the needed change.

## Furniture-as-a-Service

Our Furniture-as-a-Service is mainly available for our European clients. This service includes regular maintenance and is a functional rental of our furniture through subscription. Therefore, the setup varies from case to case, depending on the country and sector to offer the right tailored service. We are currently working together with our clients to improve and set up a suitable model.

## Buyback System

According to circular principles, products are valuable assets throughout their lifecycle. We aim to use these assets in some way still, even when these assets are not needed or used anymore, by offering to buy back the furniture, refurbish and put them back on the market again.

The Buyback System is active for all seat modules in our Nova C Series for our European customers. We can handle the maintenance through our Maintenance Service. The buyback percentages vary, depending on the state and how well maintained the furniture have been.

## Maintenance Service

Maintainability is key. The possibility to repair a scratch or easily replace parts that may have been vandalized are essential aspects of product longevity. With the right and consistent maintenance, our furniture can be kept like new overtime and prolongs the furniture's lifespan. Talk to us about our maintenance subscription service. The Maintenance Service is available mainly for our European clients.
